

LAYER7AI

(Senior) Software Engineer, Frontend (m/f/d) – Berlin / Tübingen / Remote

Start now

About us

Our product, Maddox AI, is an AI-based visual quality control solution, which can automate manually performed quality inspection for manufacturing companies. Maddox AI is an asset-light SaaS solution, which addresses those visual inspection tasks that are still performed manually, as conventional (=rule-based) computer vision methods fail. In product development, we closely collaborate with leading AI researchers from the Cyber Valley. Prof. Dr. Matthias Bethge, Prof. Dr. Alexander Ecker and Dr. Wieland Brendel have been researching in the field of machine learning and computer vision for years and are part of our founding team.

Maddox AI is used by DAX-30 companies as well as by large medium-sized enterprises. Our team consists of scientists, former strategy consultants, mechanical engineers, and software developers. We know that Layer7's success is only made possible by our unique team. As we continue to grow, we want to convince the best and brightest minds of our mission to establish Maddox as the modern quality management platform.

Your role

- Fully own your components: specify, build, test, deploy, maintain and support your code
- Leverage modern tools and techniques to develop clean, efficient and reusable code
- Translate wireframes/designs into responsive, pixel-perfect and secure web frontend UIs
- Work collaboratively and on eye-level with other colleagues from the UI/UX design and software engineering teams and incorporate their feedback

Your profile

Basic qualifications

- University degree in computer science or related technical field, or equivalent practical experience
- Highly skilled in software development with JavaScript/ES6 and TypeScript, HTML5 and CSS3
- Experience with at least one SPA framework like React, Vue or Angular
- Extensive experience with React (redux, next.js, functional components, etc.) in a production environment strongly preferred
- Experience in writing unit, integration, and end to end automated tests
- Experience with Git or other distributed version control systems
- Ability to clearly formulate problems, approaches to solutions and results to technical and non-technical audiences

Preferred qualifications

- Fulltime industry experience developing data-intensive desktop web applications and having worked in enterprise- or startup-companies (strongly preferred)
- Experience with data visualization technologies interactive visualization libraries like D3.js, FusionCharts, HighCharts, or Plotly (strongly preferred)
- Experience with common frontend development tools such as npm, yarn, webpack, bit.dev or Storybook
- Experience developing or integrating RESTful APIs
- Experience with Unix/Linux environments and Docker
- Basic understanding of UI/UX

Note that preferred qualifications are just that: preferred. None of us started out with all boxes ticked. If some of these points apply to you, we definitely want to talk.

LAYER⁷AI

Why us

We work in flat hierarchies, value direct communication, learn a lot as a team and make important decisions together. At Layer7 you can expect the following benefits:

- Independent work on projects in the field of artificial intelligence / Industry 4.0
- Flat hierarchies, a growth perspective and very good development opportunities
- A dynamic and motivated team with great colleagues (with experience from BCG, IBM, SAP, Cyber Valley, etc.)
- A competitive fixed salary, 30 vacation days and the opportunity to participate in the company's development through virtual shares (VSOP)
- The possibility to work flexibly in Berlin, Tübingen or remotely
- Regular team events
